

Website Review Feedback and Development Action Plan

Project: Tumbo Website Development

Prepared by: Reabetswe Mothiba

Date: 28 July 2026

Purpose

This document summarises the outcomes of the internal website review meeting held on 28 July 2026. Its purpose is to provide structured feedback on the current state of the website, identify outstanding work, clarify responsibilities, and guide the next phase of development.

Overall, the team is satisfied with the progress made to date. The website has established a strong foundation in terms of design, structure, and functionality. However, several areas require refinement before the platform proceeds to the next phase of development.

It is important to note that several outstanding items depend on organisational content that has not yet been provided. These items remain outside the developer's scope until the required information has been supplied.

Overall Assessment

The current website demonstrates significant progress and aligns well with the approved project scope. The website structure, navigation, visual design, and responsiveness provide a solid foundation for the Tumbo platform.

The next development phase should focus on:

- Incorporating accurate organisational content.
- Completing outstanding frontend functionality.
- Developing backend functionality.
- Refining the user experience.

Website Review

1. Website Structure

Status: Incomplete

The homepage should immediately communicate what the platform is about.

Action Required

- Redesign the hero section to clearly showcase the platform's purpose at first glance.
- Replace the current opening content with a stronger visual and messaging that reflects our core mission.
- Include engaging visuals, banners, or animations that immediately explain the platform's value.
- The first impression should eliminate the need for users to read multiple sections before understanding the platform.

2. Information Architecture

Status: Incomplete

The following content is required from the organisation:

- Company Overview
- Mission
- Vision
- Values
- Brand messaging
- Ecosystem descriptions
- Product descriptions
- Organisational messaging
- Visual representation of ecosystem components

Once this information has been received, the content should be updated throughout the website.

Action Required

- Improve the organisation and flow of information across the website.
- Ensure content is presented in a logical order that guides users naturally through the platform.
- Structure pages so users can quickly find important information.

3. Navigation Flow

Status: Incomplete

Action Required

- Ensure every menu item directs users to the correct destination.
- Improve navigation between pages to create a seamless browsing experience.
- Review all internal links and user journeys to ensure there are no dead ends or incomplete pathways.

4. Figma Design

Status: Partially Complete

Most website pages have been designed in Figma.

Action Required

Add the following missing page:

- Resources Page

Once completed, the Figma designs should fully correspond with the live website.

5. User Interface (UI)

Status: Incomplete

The current implementation does not fully reflect the design inspiration and references that were previously shared.

Action Required

- Review the inspiration material and reference websites provided.
- Align the overall design, layout, and visual identity with the approved concept.
- Ensure the final product reflects the original vision discussed at the beginning of the project.

6. Responsive Layout

Status: Complete

The website adapts well across desktop, tablet and mobile devices.

7. User Journey

Status: In Progress

The frontend user experience is progressing well.

The complete user journey will be finalised once backend functionality has been implemented.

Upcoming Features

- User Registration
- Login
- User Profiles
- User Dashboard
- Chatbot / AI Functionality
- Personalised User Experience

8. Tumbo Branding

Status: Pending Organisation Input

The visual identity has been successfully incorporated.

The following branding information is still required:

- Brand messaging
- Mission
- Vision
- Brand language
- Taglines
- Organisational descriptions

Once supplied, this content should be integrated consistently across the website.

9. Homepage

Status: Incomplete

The homepage does not align with the intended design direction.

Action Required

- Refine spacing and alignment where necessary.
- Review typography consistency.
- Improve visual balance across sections.

10. About Us Page

Status: Pending Content

The page structure has been completed successfully.

The organisation will provide expanded content covering:

- Company background
- Purpose
- Vision
- Mission
- Story
- Impact

11. Ecosystem

Status: Pending Organisation Input

The existing ecosystem descriptions do not accurately reflect the organisation.

Action Required

Replace all placeholder descriptions once the approved organisational content has been received.

12. Opportunities

Status: Complete

The uploaded opportunities have been successfully implemented.

Future opportunities can be added as they become available.

13. Resources

Status: Complete

The Resources page has been successfully implemented.

14. Success Stories

Status: Pending Organisation Input

The page structure has been completed.

The organisation will provide:

- Success stories
- Testimonials
- Supporting images

15. Partners

Status: Partially Complete

Additional partner information will be supplied by the organisation.

16. Contact Page

Status: Pending Organisation Input

The following information remains outstanding:

- Contact numbers
- Email addresses
- Office locations
- Social media links
- App download links
- General enquiries information

Responsive Design Review

Homepage Responsiveness

Status: Mostly Complete

The homepage performs well across mobile devices and adapts appropriately to different screen sizes.

Navigation Menu

Status: Functional – Requires Refinement

The navigation functions correctly but requires minor improvements on mobile devices.

Action Required

- Improve alignment of navigation items.
- Centre menu items consistently.
- Improve spacing throughout the mobile menu.
- Test complete navigation across all pages.

Responsive Layout

Status: Complete

The responsive layout performs well across the reviewed pages.

Website Styling

Status: Good

The website styling is modern, clean and professional.

Recommendation

To create a more engaging user experience, consider introducing subtle motion and interaction throughout the website.

Suggested Improvements

- Smooth page transitions
- Scroll animations
- Fade-in effects
- Hover animations
- Interactive button states
- Card hover effects

- Animated statistics counters
- Subtle micro-interactions

These enhancements should improve user engagement while maintaining strong performance.

UI Consistency

Status: Complete

The user interface demonstrates consistent styling throughout the website.

Minor refinements to spacing and alignment should be completed during final polishing.

Frontend Functionality

Status: Approximately 90% Complete

Outstanding Feature

- Chatbot / AI Page

Additional Recommendations

The team recommends the following improvements during the next development phase:

- Enhance animations and transitions.
- Improve visual engagement while maintaining fast loading speeds.
- Ensure consistent spacing across all pages.
- Continue refining the mobile experience.
- Conduct a full Quality Assurance (QA) review after backend development.

Organisation Deliverables

The following information will be provided by the organisation:

- Mission
- Vision
- Values
- Brand messaging
- Company overview
- Ecosystem descriptions
- Programme descriptions
- Product descriptions
- Leadership information
- Success stories

- Partner information
- Contact information
- Social media links
- Approved imagery
- Additional resources and supporting content

Next Phase

Once the outstanding organisational information has been received, development may proceed with:

- Updating all website content
- Completing backend development
- Implementing user authentication
- Refining responsiveness
- Completing final UI/UX improvements
- Conducting Quality Assurance testing
- Preparing for the next internal review

Additional Application Requirements

1. Opportunity Redirection Functionality

To improve the application experience and increase successful submissions, the platform should provide a seamless transition from opportunity discovery to application.

Requirements

When users select an opportunity, they should be redirected directly to the official application website, portal or online application form.

Where organisations have integrated directly with the platform, completed applications should be submitted directly through the system.

External links should:

- Open securely.
- Clearly notify users that they are leaving the Tumbo platform.
- Redirect users to the official opportunity provider.

2. Opportunity Disclaimer

Disclaimer

The Tumbo platform connects users with verified employment, education, funding, internship, bursary and development opportunities.

While every effort is made to ensure opportunities are accurate and current, Tumbo does not guarantee employment, funding, acceptance or selection by any organisation.

All recruitment and selection decisions remain solely the responsibility of the respective opportunity providers.

Tumbo's role is to simplify access to opportunities by connecting opportunity seekers with trusted organisations.

3. POPIA Compliance

To comply with the Protection of Personal Information Act (POPIA), the application should include the following:

User Consent

Users must explicitly consent to the collection and processing of their personal information before creating an account or submitting applications.

Privacy Notice

The platform should clearly explain:

- What information is collected.
- Why it is collected.
- How it will be used.
- Who it may be shared with.
- How long it will be retained.
- How it will be protected.

Data Protection

Personal information should be securely stored and encrypted where appropriate.

Access must be restricted to authorised personnel and approved system processes.

User Rights

Users should be able to:

- View their personal information.
- Update inaccurate information.
- Request deletion of their account (subject to legal requirements).
- Withdraw consent where applicable.

Sharing Information

Where application details are submitted directly to an organisation, users must be informed that only the information required for that application will be shared, and only with their

consent.

Expected Outcome

These enhancements will create a seamless application journey, strengthen user trust, improve legal compliance with POPIA, and position Tumbo as a reliable bridge between opportunity seekers and opportunity providers.

Conclusion

The review team is satisfied with the progress made to date and acknowledges the quality of work completed during this phase of development.

The next stage of the project will focus on integrating approved organisational content, completing backend functionality, refining the user experience, and preparing the platform for comprehensive quality assurance testing and deployment.

Once these outstanding items have been completed, the website will be well positioned for final review of this phase.
